ABSTRACT:

The subject of my bachelor thesis is Awareness of women aged 20 to 40 years in the urinary incontinency arising in connection with pregnancy and childbirth.

The thesis is divided into two parts - theoretical and practical one. The theoretical part is devoted to the anatomy and physiology of the female urinary tract and urinary incontinence, its types, aids, treatment, prevention, education, and economic issues. I have been identifying, the level of awareness of women in urinary incontinence arising in connection with pregnancy and childbirth, in the empirical part. I have used quantitative research to achieve results. My research was conducted using questionnaires.
