

The bachelor thesis deals with natural environment in strategic plans of microregions, in which natural environment can appear as a potencial and a limit of the socioeconomic development. The aim of this thesis is to research the role of natural environment in strategic plans of microregions. The next aim is to evaluate importance of natural environment components in analytical and proposal part of documents. Method of critical text analysis, exactly analysis of three strategic plans of microregions, which were chosen on the basis of some determined criterions, is used in this thesis. The analysis is focused on three thematic parts. Firstly, on structure of natural environment, secondly, on evaluating of natural environment from the point of view of the socioeconomic development, and thirdly, on the bond between the natural environment and the proposal socioeconomic development.
