

The thesis *Temelín Nuclear Power Station and Czech-Austrian Relations* deals with the Temelín Nuclear Power Station and nuclear industry and its influence to the Czech-Austrian relations. The study aims to analyse the relations between the Czech Republic and Austria in the context of the power station from 1993 to 2013. Initially, the thesis introduces the theory of constructivism in the International Relations. Afterwards, it aims to explain the differences between the relations to the nuclear energy by Czechs and by Austrians on the basis of the theory of constructivism. Moreover, the thesis introduces the historical, legal and technical circumstances of the Czech-Austrian dispute. The main objective of the thesis is to ascertain, what effect on the Czech-Austrian relations have mediums, which publish articles about the Temelín Nuclear Power Station. There are four Czech relevant newspapers (Blesk, MF DNES, Právo and Lidové noviny) and four Austrian relevant newspapers (Kronen Zeitung, Kurier, Der Standard and Die Presse) inquired in the thesis. Particular articles are evaluated by the stances on the issue (pronuclear, antinuclear or impartial). The thesis identifies, which of the mediums have impact on deterioration/improvement of the Czech-Austrian relations. The study also deals with the process of Europeanisation and its impact on the issue. On the basis of examined knowledges, the thesis attempts to sketch the progress of the Czech-Austrian relations in the context of the Temelín Nuclear Power Station in the future.
