

Abstract

The Legal regulation of biodiversity protection within the agriculture
Vojtěch Bašný, supervisor: doc. JUDr. Vojtěch Stejskal, Ph.D.

The agriculture is one of the main causes of the damage of the biodiversity. The continuous biodiversity damage leads to the loss of the ecosystem services and to decrease in numbers of species and habitats of high nature value. This could in the extreme case lead to the danger to the mankind because biodiversity provides the nutrition, water, clean air, and helps in a fight against illnesses and pests and contributes to the regulation of the climate. The aim of my thesis is to analyse the legal regulation of the biodiversity protection within the agriculture and evaluates the accuracy of specific approaches and offers the solutions of certain deficiencies. The thesis gives an overview of different aspects of the legal regulation of the relationship between biodiversity and agriculture on the level of international, EU, and Czech legislation.

Key word: Legal regulation, Biodiversity, Agriculture
