

Abstract

Title: The comparison of the conditions for teaching Educational area of Man and Health in primary and secondary schools

Objectives: Research whether schools have such conditions for teaching Educational area of Man and Health in order to achieve the objectives of framework educational programs. Research basic information about the structure of PE teachers in primary and secondary schools and on the structure of PE teachers in Prague and Pilsen region. Research the different conditions of teaching Educational area of Man and Health in primary and secondary schools in Prague and Pilsen Region. Propose appropriate solutions to improve the situation.

Methods: We used for comparison of results of non-standardized questionnaire containing mainly closed types of questions. The questionnaire survey was for PE teachers in elementary and secondary schools. The surveyed regions were Pilsen Region and Prague.

Results: We found that overall conditions in schools meet the standards of basic curricula. Overall conditions prevent attainment of the objectives and tasks set out in the basic curricula. Conditions for physical education are demonstrably better at primary schools than at secondary schools. Higher educated teachers are located at secondary schools and in Prague Region.
