

Abstract

Name: Analysis of an individual playing performance of U13 players

Aims: The aim of the analysis is to assess technical level of U13 players, specifically the percentual success rate of collecting the ball and to identify the on-spot ball collecting and in-motion ball collecting ratio. Furthermore to find out the successfulness of the move following the on-spot collecting a in-motion collecting.

Methods: Empirical research by the observation method is focused on the quantitative analysis of qualitative features of ball collecting.

Findings: The result of the research is, that examined subjects have more successful than unsuccessful ball collecting attempts. Furthermore, the more used technique of ball collecting is the on-spot collecting and that success ratio of the following move is higher in in-motion collecting.
