

Abstract

Title: Personal sport equipment of FTVS UK students

Objectives: Main objective of this diploma thesis to find out personal sports equipment of students by survey method. The goal is to analyze students sport equipment for their personal use and ownership, how much financial resources students invests into sport and at the same time use analysis to determine which sports are preferred by students and which sport brands are the most popular.

Methods: Main tool for obtaining necessary data, which are used in our diploma thesis, is the questionnaire in online form. To evaluate obtained data from our respondents we have used statistical methods. In the introduction we have checked and classified, determined in the next step of research process (analysis of answers). This allowed us to research mutual relations between individual categories. Other methods that we used were for example: analysis and synthesis, scientific abstract, comparison method, mathematical and statistical methods.

Results: From our research it is obvious that the students invest significant amount of their financial resources into sports equipment. From the acquired answers we can claim, that personal sport equipment of students is rich and diverse. Students are dedicated to more classical sports promoted by schools in the past, like tennis, handball, soccer, but at the same time they are open to modern less traditional and unique to this region such as windsurfing, lacrosse, softball etc.

Key words: sport, free time, sports equipment, financial resources, students, personal ownership
