

# **ABSTRACT**

The work is mainly focused on the issues of developmental dysphasia and its therapy. The first part describes the development of human speech, then ontogenetic development of man, communication ability and impaired speech development. A separate chapter is devoted to developmental dysphasia, its etiology, symptomatology, and then the therapy. The second part focuses on establishing a therapeutic material, where tasks are compiled according to the individual needs of the reference boys with developmental dysphasia.
