ABSTRAKT

This Bachelor thesis highlights the possibilities of environmental education in kindergarten and school company with practical activities. In the theoretical part, first of all, I am mapping out the framework education programs for pre-school and basic education and the charakterizují environmental education and its interconnections with practical activities.

The aim of the practical part of the drafting and realisation of a minor part of the project, focusing on environmental education. The project was primarily to provide children the opportunity to get acquainted with some methods such as observation, the use of the results for other activities, exploring the connection between different phenomena in nature, get to know the environment in which they live and to obtain a positive relationship to him. Overall, it was aimed to promote the development of the child as a personality-oriented proenvironmentally.
