

Abstract:

Phenomenon of life exceeds the science. Definition(s) of this concept should be a basis. This work discusses many sights around the definition of life and searching for the essence of life and it tries to embrace these factors in their entirety by quoting both traditional definitional approaches and the less traditional ones and possibly even futuristic ones. In a shortcut this text analyse instructions on how to define. Considering the extensiveness of the topic this bachelor's thesis touches thoughts of the scientific interdisciplinary framework.

Keywords:

definition of life, life and non-life transition, anti-definitionism, autopoiesis, cybernetical approach, biosemiosis
