

Abstract

The bachelor's thesis "Flexicurity – a possible way how to solve unemployment" is aimed at persistent problems with unemployment. Summary of the development of unemployment, employment and expenditures on the employment policy in European countries is followed by the explanation of flexicurity and description of development in Denmark during the second half of 20th century. The thesis attempts to examine dependence of unemployment on expenditures on employment policy and GDP growth in Denmark. In the last part it focuses on the Czech Republic and its attempts to implement flexicurity and advises the Czech Republic how to better utilize active labour market policies, hence flexicurity model.
