

Abstract

The primary aim of this thesis is to analyse and rate the project WikiSkripta from the point of view of its use. The creation, evolution up to now, organization and results of the project are being presented. The core of this thesis is the questionnaire survey to the students of certain faculties of medicine in Czech Republic, based on the analysis of the WikiSkripta system. The introductory part gives a brief summary of professional medicine education in the internet area. The following chapter gives more close characteristic of the creation and evolution of the parental project of WikiSkripta - the MEFANET. The next part gives the analysis of the project WikiSkripta. The other part, the survey of the use of WikiSkripta, gives a comparison of the partial results of the survey. The given data from the survey are evaluated in the conclusion of this work. The thesis is processed on the base of my own analysis of the webpage WikiSkripta - both the content and the support part - and the result of the questionnaire survey.
