**Key words:** education, educational process, neonatal department, rooming – in, physiological newborn, physiological period, breast – feeding, artificial nutrition

## **Summary:**

Bachelor thesis provides comprehensive information about the education of mothers in the care of normal newborns at the neonatal ward.

In the theoretical part describes the various deadlines and accurately explain their content, while in the empirical part, I used the knowledge gained from practical as individual mentors working at the neonatal department and directly surveyed mothers. The research identified a need to create an educational manual on the basis of individual information will be provided and that mothers provide sufficient time for their questions. The material can be also used as training manual for nurses. These training materials will assist to improve the quality of nursing care for newborns in our department. The research sample of respondents was drawn from the mothers after childbirth, who were hospitalized at a confinement department in Regional Hospital , placed in Kolín.
