Abstract:

My diploma paper is focused on integration of foreigners´ children into education at grammar schools. The aim of my paper is to theoretically explain in more detailed way social and pedagogic aspects of foreigner´s integration in connection to their integrity into educational system. And on the basis of exploration I want to examine readiness of schools for integration of pupils – foreigners into educational program at grammar schools in regional town Ústí nad Labem.

My diploma paper is divided into two parts – theoretical and empirical parts. The first theoretical part of my diploma paper is focused on general theoretical approach to foreigners´ and integration policy of the European Union and last but not least to the development of migration in the territory of the Czech Republic. It is focused on education of children of foreigners, particularly to its legal basis in Czech law and to inclusive education which is understood to be higher level of integration. The last part is dedicated to integration of foreigners´ children itself.

I worked out an examination project which is in the empirical part. This project is focused to examination of readiness of basis schools in Ústí nad Labem for presence of foreigners´ children into schools and readiness of these schools to integrate these children with specific educational needs.
