

Abstract:

This work deals with movement methods used in speech therapy. The main goal is to point out on movement therapy used in therapy of communicative disorders. The first part of work explains terms such as therapy and introduces the acquisition of speech through speech-movement therapy. The second part of work is focused on the accent method of voice therapy and its application during therapy of voice disorders. An important part of my work are physiotherapeutic methods used in speech therapy such as Padovan method, myofunctional therapy of A. Kittel, Pető method of conductive education, synergetic reflex therapy and Vojta method. The last part of my bachelor thesis is focusing on my own experience in the field of the speech therapy. The conclusion of this work is that using moving activities in therapy of communicative disorders is very helpful for the patient. And I would recommend putting movement therapy in speech therapy into practice in Czech Republic. It would be very beneficial for the field of speech therapy. This work also includes attachment with pictures.
