

Abstract

My thesis is called “Sport fishery in Prague and the main motivation for this hobby”. The Vltava river belongs to the main rivers in Czech Republic. It begins its flow when the Warm Vltava and the Cold Vltava join in the Šumava mountains. In my thesis I occupied with the analysis of the Prague’s part of the Vltava river. I concentrated to the quality of the water and local ichthyofauna. There is mentioned the history of the fishery in Prague and current situation of the fish territory. In detail there is watched the fishery at the territories Botič 2 (ÚN Hostivař) and Vltava 5. Here I watched the catches of the specific fish’s species in the fixed period. Using the survey I found out the motivation for the fishery and student’s knowledge of the “Fishes” at the chosen secondary schools. At the end I prepared themes (theoretic and practical) as a content of the kid’s fishery society for the whole school year.

Key words: The Vltava river, fishery, fish catches, motivation, students
