

Abstract

The diploma thesis deals with legal regulation of air protection against pollution from stationary sources especially with the Act no. 201/2012 Coll. on the Protection of Air. The opening chapter introduces to the issues and systematics of the diploma thesis. The second chapter contains the overview of the most important pollutants with their impacts on human health and the environment. The third chapter concerns the international regulation of the air pollution protection including the European Union regulation. The fourth chapter describes the development of the air protection legal regulation in the Czech Republic. The fifth chapter gives attention to the definition of the stationary source of pollution. The sixth chapter deals with the level of pollution and the tools connected with this level. The seventh chapter is about the regulation of the sources of pollution. The final chapter summarizes the previous text and contains the evaluation of the legal regulation of the air protection.
