Title of diploma thesis: Prevalence kuřáctví mezi budoucími zdravotníky

The aim of this thesis was collect data of prevalence of smoking among future health professionals and compare them with results from GHPSS (Global Health Professions Student Survey) studies. This study took place in various countries and concerns of smoking among health professional students.

The results show that it is necessary to improve the current state of tobacco policy in the Czech republic. There should be special anti-smoking programs across the whole school system and beside that there should be special care for health professional students. Health professional students should lead by examples.
