

**Abstrakt v AJ:**

This diploma thesis deals with the field of nursing diagnosis in internal intensive care units. The theoretical part describes the basics of the nursing process and mainly focuses on the nursing diagnosis. Subsequently, it informs the reader about history, development and structure of the NANDA Taxonomy II. The main part of the thesis consists of a quantitative survey which aims at general nurses' knowledge about the nursing diagnosis NANDA – International. It also comments on how nursing diagnoses are made and what opinion general nurses have about making nursing diagnosis and NANDA taxonomy II. Finally, it provides the reader with overview of nursing diagnoses that general nurses often come across in intensive care units. And these diagnoses create uniform file according to the NANDA Taxonomy II.
