ABSTRACT

The presented diploma thesis deals with the subject of non-medical rescue services. The main purpose is to analyze medical services provided by non-medical rescue services – especially Mountain Rescue Service and Mining Rescue Service. The theoretical part introduces the reader the activity of these two services provided in the Czech Republic from the perspective of organization, history, provided services, financing, legislation, professional training of the staff, and available equipment. The research part of the thesis is created on the basis of qualitative research using the method of content analysis of the statistically validates documents. The research results inform about the real extent of provided services, and give the concise information about the frequency and reasons of emergencies. This part of the thesis is completed with the information about the real education of the staff and short interview with leading managers.
