

Abstract

Title: Case Report of a Patient after Amputation of Upper limbs

Summary: This thesis consists of two parts.

The first part is general and concludes theoretical basis of the amputations, presenting their history, indications, complications, possible surgical interventions, orthotic prosthetics and rehabilitation care.

The second part is special and concludes case report of a patient after amputation of both upper limbs. The case report consists of a musculoskeletal assessment of the patient and a re-assessment, rehabilitation plans, proposal of the therapy, performance of therapeutic units and finally evaluation of the effectiveness of the therapy. The case report was worked out during my rehabilitation practice on the Rehabilitation clinic Malvazinky in Prague.

Key words: fyziotherapy, physical therapy, amputation, upper limbs amputation, case report
