

Vulgarity is becoming to be an increasingly discussed and interesting topic, although not deeply explored by science. This thesis includes a survey focused on vulgar gestures. The main objective is to compare differences in perception and expression of non verbal vulgarisms- gestures among 1) boys and girls 2) two different teenage groups, in terms of frequency, form and purpose of using the gestures. I mainly use a closed, semi-closed or open questions in the questionnaire, which also includes a parallel presentation of each gesture. A sample of respondents is composed of to groups of teenagers at the age of 1) 13 - 15 and 2) 16 - 17 - who are willing to participate.
