

Abstract

This Master's degree thesis deals with the renewable energy sources regulation in the Czech Republic. It also mentions the European Union legislation on the topic and its development and focuses on the most important Directives and their goals as well as Member States' obligations.

It presents Czech regulation in force and the conceptual documents in greater detail. It also points out the system of support available for the promotion in using the renewable sources of energy. Finally it examines the renewable energy sources of the small extent and the decentralized power generation as well.
