Position of nurse in the Czech Republic

The theme of my work is position of nurse in the czech society. I would like to get objectives informations to describe present reputation of nurses. This theme can improve their position and help to incoming changes in the future.

In the theory I write about reputation of jobs, about professional image of nurse and about history of this image. I write about history of nursing, and this from aspect position of nurse, it mean the status of doctor and nurse.

In this time it constructs positive all-society conditions for independence activity of nurse, therefore it needs old terms between doctors and nurses to transform. Knowledges and career - there are very important conditions to increase job's prestige.

The informations, which I am using in the empiric part, I was obtaining from two answer sheets. These answer sheets were faceless. The first was addressed to nurses and the second to doctors.

It's good to observe, that I would like to change anything, I have to start by myself. And we have to talk aloud.
