The bachelor thesis deals with accessing to the electronic journals in Czech Republic's libraries. The theoretical part of the thesis defines term electronic resources (ER) and its parts. The thesis describes types of tools used by libraries for accessing ER and it describes examples of particular tools.

The practical part of the thesis comprises analysis (based on interviews with ER managers) of ER solutions in three libraries – Library of the Faculty of Arts of Charles University in Prague, Library of the Academy Sciences of the Czech Republic and Municipal Library of Prague. Libraries are then compared, theirs problematic parts are identified and the solution to those problems is proposed.
