

Title: A survey into Czech teachers' attitude towards inclusive education

Name: Luo Hui

The chosen topic is closely connected to Luo's professional experience gained in China and later in Europe. Thus Luo conducted a piece of research on aspects of his educational practice which are professionally relevant to him.

The idea about the report is clear to readers from the abstract. Objectives of the study are stated and put into broader international framework.

The literature review provides an indication of the current state of knowledge in the subject with sufficient number of references.

The research methods are justified together with identifications of their weaknesses. Ethical aspects of the research are considered.

Research outcomes are discussed and well commented. For viva I suggest presenting grounds for the (choose one or two please) statements (indicators) with relation to research questions. In other words please, justify your choices of the statements.

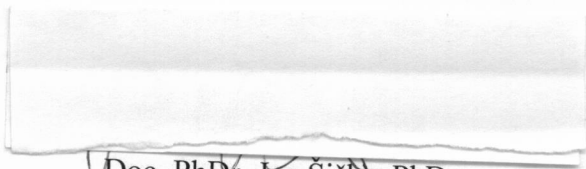

The conclusions are based on evidence. Recommendations for future research and practice are discussed. I suggest discussing also feasibility of the recommendations. I also recommend considering, how you will apply the research outcomes in your professional carrier, which research outcomes (if any) are particularly relevant to Chinese policy and practice in SEN education?

I would like to particularly acknowledge Luo's ability to critically and dispassionately analyze, discuss and reflect literature, methodology and research outcomes. Luo's dissertation is written in scientific and academic style. The research outcomes could be well published as a paper in a scientific journal.

I recommend Luo Hui for viva.
