

Supervisor's Assessment of the Bachelor Thesis

Title: **Case Study of Physiotherapy Treatment of a Patient with
the Diagnosis Shoulder Luxation**

Autor: **Emmanouil KASSAKIS**

Supervisor: Doc. Dr. Dagmar Pavlů, CSc.

The bachelor thesis titled “*Case Study of Physiotherapy Treatment of a Patient with the Diagnosis Shoulder Luxation*” is written on 96 pages, supplemented with 7 pages of annexes, using 51 bibliographic sources.

The paper is structured as a standard bachelor thesis with five chapters. General part (chapter 2) – written on 52 pages includes description of anatomy and shoulder dislocation (epidemiology, evaluation, procedures and follow up care). This part is overly large, particularly the sections which describe the anatomy. To the contrary it must be said, that the used sources are cited in the text correctly.

The main goal of this thesis is to present case study of one patient, which was treated by student during 7 therapeutic sessions. Mentioned case study is described in the special part on 36 pages and includes: methodology, patient's history, initial kinesiology examinations, proposal for treatment – short physiotherapy plan and long physiotherapy plan, description of physiotherapeutic sessions and after all final kinesiological examination with evaluation of the effect of the therapy. This part of the thesis is written studiously; to describe and demonstrate diagnostic as well as therapeutic procedures I have no essential objections.

To formal and linguistic aspects: Regarding formal aspect I have no more comment. It should be noted that the (English) language in which the paper was drafted is not the writer's native language, which is rather apparent. There are also many typing errors and failures in formulation.

Comments:

I have a few minor comments and questions for the defence:

- signature in declaration is missing,
- there are some typing mistakes in the text (missing of spaces between words and/or numbers, etc.)

Questions for the defence:

- Explain and describe the scapular manipulation which is demonstrate on the picture No 36 (p. 43)
- What you mean with the term “reduction technique” (picture p. 43, picture p. 44, picture p. 45, etc.)?
- Picture No. 45, p. 67: Are you satisfied with the exercise on the picture? Are any modifications helpful for the patient?

Conclusion:

Despite the objections stated above, I note that the writer of the bachelor thesis demonstrated capability of dealing with the issue at hand.

I therefore recommend that the Committee for State Final Examinations **accept** the work of student Emmanouil Kassakis for viva voce defence and I propose a mark of very good.
