Defense year:	2015
Keywords:	child, parents, knowledge, first aid, resuscitation

The presented bachelor thesis deals with the knowledge of parents of preschool children by providing first aid to children in selected acute conditions, that they could meet in their everyday life. It contains a summary of basic concepts and procedures related to children in preschool age, first aid, selected acute conditions of childhood and lay resuscitation of child. The empirical part was carried out by quantitative exploratory investigation. The required data were obtained from the parents of children in Kindergarten in Chrastava and Elementary school practical and Kindergarten in Hrádek nad Nisou . Based on the analysis of the data reveals gaps in knowledge work of parents in providing first aid and especially in resuscitation. It was therefore suggested recommendations that could contribute to improving the level of awareness among parents about first aid provided to children.
