

Summary

Osoby se zrakovým handicapem v seniorském věku

Elderly Persons with Visual Impairment

The bachelor thesis deals with visual impairment.

In the theoretical part I described eye disorders, special aids, the Braille writing system, the correct method of communication with a blind client, and so on. Also, I focused on reminiscence and the reminiscence therapy, which captured my attention when I was reading a book devoted to this topic.

The practical part is more devoted to seniors with visual impairment. I conducted interviews with clients who responded most willingly and helpfully. I learnt about client satisfaction in the home and about the quality and human care they are provided.

I am aware of the fact that such an approach is not very common. In our country I encountered rather worse conditions and approach. That is why I am glad to have been able to visit a facility that is professional and meets the needs of its clients.
