

Abstract

The theme of the theses is the new legal regulation of air quality protection in Czech Republic, which is mainly represented by the Act no. 201/2012 Coll. on Air Protection. The opening chapters deal with the definitions of the basic terms in this legal area, the characteristic of the main air pollutants and the development of the air protection legal regulation in Czech Republic. The treatise on the new legal regulation is divided by the legal instruments of air quality protection – the individual chapters deal with conceptual, administrative-legal and vindicatory, economical and specific instruments. The final chapter contains the summary of the major changes and the evaluation of the new legal regulation.
