

# **Systémy pro správu obsahu s důrazem na využitelnost v knihovnickém prostředí**

**Michaela Pappová**

## **Abstract (in English):**

*The work is focused on open source web content management systems (WCMS), the conception and contextualisation. The advantages and negative factors associated with the use of these systems are discussed based on SWOT analysis. The next section presents selected WCMS - Wordpress, Drupal, Joomla! and Plone. These systems are compared in terms of potential utilization / deployment on the web, especially for small and medium-sized libraries by analyzing a sample of library web sites and specialized extensions, functions and other options offered by the system.*
