

Diploma thesis „Prague gambit at the global chessboard – Analysis of the steps of the Czech presidency in the “New Great Game” for energy resources of the Central Asia “ carried out with help of the mathematic model” deals with the activities of the Czech Presidency in the Council of the European Union focused on diversification of the European energy supplies through the so-called Southern Corridor. The main goal of the thesis is to answer the question, how the Czech presidency succeeded in increasing the probability of realizing the diversification projects within the Southern Corridor. For this purposes, the mathematical model describing the interaction among the global powers has been created. This model has been subsequently applied to the competing of the European Union and the Russian Federation for the Central Asian producer countries and the South Caucasus transit countries.
