

Abstract

The parent center is currently the phenomenon, which is compared with the "State" schools or more today to discuss "the children's group" devoted less attention. And, in particular, in the section that deals with the care of children without parents. Although the parent centers help solve one of the social and political problems, the Czech Republic- the lack of places in nursery schools, in crèches, they lack support. Legislative support, support the child care area in MC without the participation of the parents. In the Czech Republic currently operates a total of 427 MC and in the Liberec region, on which I focused in the empirical part, has 21 maternity center. Of these 21 parent service center to care for children without parental involvement provides a total of 14 maternity center. And the MC feels the need to legislative support, which would be welcomed by, clearer rules for the operation of the parent center, especially in the environment of a child without the participation of the parents. This support is important in all activities that MC. Maternity Center is not just about "meeting", but also on the promotion of intergenerational cohabitation, create facilities for families with children, and last but not least, active participation to facilitate the return of women and men back into the labour market.
