Název bakalářské práce:

Case management z pohledu ergoterapeuta u osob se spinálním poraněním,

Case Management from the point of view of the occupational therapist in persons with the spinal cord injury

Abstract:

This Bachelor thesis concerns to case management for patients of spinal cord injury. It focuses on the concept of case management. This is a coordinated manage of case. Informs about the possibilities to connect services with the user and to coordinate the various phases of rehabilitation for spinal patients whose treatment is lengthy and takes place in many medical facilities. Furthermore, there also we find out what services the case managers offer to users. Case management is widely used abroad but in our country is developed gradually and with considerable delay. We will find out whether it be used in this patient group in our country and how. We will learn how looks the organizations system of rehabilitation in selected facilities, interconnection of rehabilitation and information on spinal program in the Czech Republic and abroad. An integral part of the Bachelor thesis is involvement of occupational therapist in this process and evaluation the information on how the occupational therapist may participate in the case management. The practical part aims to determine whether rehabilitation facilities uses case managers and whether case management is benefit for patients with spinal cord injury. We will try to also confirm or disprove two hypothesis with help of questionnaire research and interviews with patients and with different medical facilities. The discussion then is processing discovered findings and compares them with the findings of other authors.
