

The bachelour thesis discusses research methods of information behaviour. The introduction of this work reviews information behaviour in terms of information: need, request, seeking and search. The body introduces basic theories and models which were created at the time of studies of the mentioned subject. The core of the thesis examines methods of research based on three basic approaches: sociological, psychological and from discipline HCI. This review also consists of details on specific methods of information behaviour such as, transaction log analysis or citation analysis. Besides each method there are described advantages and disadvantages which determine the methods being applied. In conclusion the thesis shows a brief analysis of research on students and academics of Social Science and Humanities.
