This dissertation thesis is aimed into costs of civil proceedings, especially general costs of civil proceedings and special costs of civil proceedings. Regarding the special costs of civil proceedings it deals with its renumeration (amount and extent). Existing czech law was compared on given cases with german and english law; economic analysis of existing czech law governing the renumeration of general costs of civil proceedings was went through and as the result the externalities were found and defined with the consequences the law lead to. The dissertation thesis has found a mathematical formula for calculation of summary renumeration of costs accompanied with lawsuits so that for the creditor it is more economical to sue the debts than to cede them to the debt collecting companies, and together with that the new law is proposed to prevent externalities that destruct the functioning of civil courts by flood of multicopy-lawsuits and externalities that mean property transfer from wide level of citizens towards to the few individuals (bailiffs).
