Abstract

This thesis deals with the implementation of basic registers of public administration in the Czech environment. The aim of the work is to analyze the current development project of the government and the causes of its origin within the overall context of the development of eGovernment in the Czech Republic. The thesis also includes a historical excursus into the issue of data records that are currently part of the system of basic registers. The last chapters of this work contain a brief analysis of local eGovernment concepts and basic public records data (inhabitants, businesses and local data) in the Slovak Republic and the United Kingdom of Great Britain and Northern Ireland.
