

## **Abstract**

The bachelor's thesis *Indication of Female Gender in New Names of Professions* is divided into two parts. The first one describes the indication of female gender in linguistics theory and presents main suffixes used for the indication of female gender. The second part tracks occurrence of the expressions excerpted from the vocabulary *Nová slova v češtině 1 a 2* and the article *Pojmenování nových profesí u pozic v oblasti ekonomiky a podnikání (v rusko-českém srovnávacím plánu)* by Ljuba Mrověcová (2009). The expressions were searched for in the corpus SYN 2010 and Neomat database. Lists of names, both found and not found in the sources mentioned above follow. The meaning of less known names is explained in the alphabetical vocabulary.
