Abstrakt

This bachelor work is dedicated to utilization of an exposition flora of Central Europe botanical garden of Faculty of Science, Charles University in Prague for teaching biology. The work is focused especially on lessons of vascular plants – categorisation of this theme in curriculum of chosen countries of Central Europe (the Czech Republic, the Slovak Republic, Poland), and curriculum of Great Britain for comparison. The work also deals with textbooks for elementary schools and grammar schools which – before the excursion itself – should present to pupils some significant plant species and characteristics of families.

Keywords: Flora of Central Europe, field trips, botanical garden, textbook of botany, curriculum
