ABSTRACT:
This master’s thesis deals with the communication disorder dyslalia in adult’s age. Firstly brings components of speech intervention, especially speech therapy. Secondly describes dyslalia, its etiology, classification, diagnosis and prevention. Mostly this thesis deals with dyslalia therapy and its adults specifics. It gives examples of usable therapeutic materials in the Czech Republic also abroad. Thesis also judges the situation of adult’s therapeutic materials on the market. The main intention was to create a therapeutic material for adults with dyslalia diagnosis. It was created 100 worksheets for frequently disturbed Czech sounds (L, R, Ř, Č, Š, Ž, C, S, Z, ČŠŽ / CSZ). These worksheets were practiced and evaluated by several clinicians.

KEYWORDS:
therapeutic materials, adult’s age, dyslalia, speech therapy
