Abstract

Title: Description of somatotype as part of sports performance in sports dance.

Objectives: Create images of selected portions of the structure of sport performance in sport dancing. Help everyone in this sport. Establish model Czech dance couples in the world's top closer, only with a certain measurement for certain segments of the exercise.

Methods: For the Purposes of this paper we will work with methods: analysis of scientific literature, the method of interviewing, observation method.

Results: The aim was to show the close similarity between the partners and partner dancing couples individually and as a whole. These results I was able to prove (the differences were minimal). Based on my research, it is possible to generalize the model, which is important for dance and sport for all athletes who want to get closer world leaders.

Keywords: Sports performance, sports dance, posture, BMI, WHR, height, weight, Latin American and Standard dances, somatotype.
