ABSTRACT

Title

Case Report of a Patient with Diagnosis of Guillain-Barré Syndrome

Summary

This thesis consists of two parts, a general part and a special part. The general part summarizes theoretical basis of the Guillain-Barré syndrome. It represents the etiology and pathogenesis of the disease, its clinical marks and course, diagnostics and cure. Forms of the syndrome are defined.

The aim of the special part is a case report of physiotherapy care for a patient with Guillain-Barré syndrome. It was worked out at the time of continuous bachelor’s practice in Vršovická, a.s. in Prague. The case report is initiated with a musculoskeletal assessment of the patient, and continues with performance of the therapeutic units and re-assessment of the effectiveness of the therapy. The effect of the therapy is evaluated on the basis of comparison of the both assessments.
