

## **Abstract**

**Title:** The casuistry of care for a patient with a Colles fracture

**Objectives:** The purpose of my bachelor's thesis is to get to know the issues related to a Colles fracture and the patient's casuistry.

**Methods:** The work is split into two parts: the theoretical part and practical part. In the theoretical part I am describing the anatomy, kinesiology, classification of fractures and listing information about the Colles fracture and its treatment and rehabilitation. The practical part contains a casuistry of a patient with a Colles fracture. It involves an input kinesiology analysis, therapeutic lessons, an output kinesiology analysis and ends with an evaluation of the therapy effect.

**Keywords:** fracture, distal radius, casuistry, physiotherapy
