

Supervisor's Assessment of the Bachelor Thesis

Title: **Post-operative physiotherapeutic intervention and management after proximal femur hemiarthroplasty, in elderly patient**

Autor: **Panagiotis SAVVOPOULOS**

Supervisor: Doc. Dr. Dagmar Pavlů, CSc.

The bachelor thesis titled the “*Post-operative physiotherapeutic intervention and management after proximal femur hemiarthroplasty, in elderly patient*” is written on 82 pages, supplemented with 6 pages of annexes, using 26 bibliographic sources.

Topicality

The theme of the thesis chosen by the writer is clearly very topical and deserves to be resolved. The main goal of the thesis is to present one case study of physiotherapeutical treatment.

Structure of the paper

The paper is rather voluminous – especially general part, structured as a standard bachelor thesis with six chapters. The structure is acceptable for a thesis paper dealing with this particular topic.

Language and graphic standard

Paper was drafted in English. The whole work is written exactly, graphic standard is very good.

Material, methods used, processing, conclusions

The case study constitutes a relatively substantial part of the paper. The writer meticulously describes initial kinesiological examination, therapy progress and final kinesiological examination as well as evaluation of effect of therapy and also prognosis.

Comments:

I find the submitted thesis to be well-drafted and I have no questions and comments.

Conclusion:

Despite the objections stated above, I note that the writer of the bachelor thesis demonstrated capability of dealing with the issue at hand.

I therefore recommend that the Committee for State Final Examinations **accept** the work of student Panagiotis Savvopoulos for viva voce defence and I propose a mark of excellent.

Question for viva voce:

Explain and describe - which therapeutical procedure was most effective by your patient?

Prague, 25 of April 2016
