

## **Abstract**

In order to better understanding of influence of architectural environment on building neighborhood community and close relationships within neighborhood is this bachelor thesis concerned on architectural influence of specific neighborhood in Prague Na Hřebenkách. Not only architectural aspects of residents of this community are examined by the case study which consists of surveys and semistructured interviews. Results of the empirical part reveal that architectural environment was latent determinant in the development of this community. Other aspects like joint building of location and homogeneity of community have greater impact on interpersonal relationships within neighborhood
