

Abstract

This thesis concentrates on sibling constellations and its influence on IQ. Its goal is to sort different approaches to the topic, compare different studies and suggest new methods of research of this topic. There have been a lot of studies made about this topic but most of them give different, if not contradictory results. Some studies are long-term whereas other study the subjects only once or short-term. This can be one of the causes for different results in the topic of sibling constellations and IQ. This thesis should serve as a theoretical base for future research.
