

Abstract:

This work surveys whole life of Tibetan emperor Thisong Decän. It tries to be as comprehensive as possible. It includes territorial expansion of empire and introduction of Buddhism as state religion, but also other minor topics such as succession to the Tibetan throne or his death.

There are many works about Tibetan history, but even top researchers sometimes contradict each other in their statements. This is the reason why I have tried to compare knowledge already known to scientific world.

I have to admit that this work does not produce any innovative information to the world of researchers. It is only a summary which could be useful for Orientalists-beginners or people interested in Tibetan history.
