

ABSTRACT

Title of the thesis: Case study of patient after fracture of acetabulum in left side

Author: Saad Al Amri

Work placement: Kladno U Nemocnice

Summary

In the bachelor thesis, which was written by my self, it is divided in two parts, theoretical part and special part.

The theoretical part describes anatomy of hip joint, it's bones, muscles, ligaments, nerves and blood supply of the hip joint. Information about kinesiological and biomechanical point of view were discussed as well.

In the practical part I analyzed procedures I have done with the patient, all examinations, conclusions, therapies and results.

Last part of the bachelor thesis it contains list of literature used in the bachelor thesis, it contains list of figures and tables used in the thesis, abbreviations and the ethics committee.

Keywords: hip joint, acetabulum, range of motion, fracture, pelvis, exercise
