Number of annexes: 3
Year of defense: 2015
Key words: pregnancy, quality of life, WHOQOL-BREF, QOL-GRAV

This bachelor thesis detects and compares quality of life of healthy pregnant women during II. and III. trimester of pregnancy. It studies effect of demographic factors (age, education, gravidity) on quality of their life during pregnancy. It detects frequency of somatic and psychic changes as well as their coping strategies during II. and III. trimester of pregnancy.

Theoretical part of the thesis summarizes theoretical findings from the area of pregnancy and quality of life.

Empirical part of the thesis includes quantitative research implemented by means of WHOQOL-BREF generic questionnaire and QOL-GRAV specific unidimensional questionnaire filled by pregnant women in Hradec Králové and Central Bohemia Region.
