<b>Keywords:</b>	Chronic kidney disease, haemodialysis, dietotherapy, fluid restriction, nutrients.

This bachelor thesis deals with patient's nutrition in chronically haemodialysis program. Theoretical part mentions anatomy and importance of kidney, kidney failure and methods of replacement of kidney's functions. It describes specifics and importance of dietotherapy, basic nutrients, diet recommendations and results of violation of nutrition rules (malnutrition). Exploratory part was made in form of questionnaire by 63 respondents – 36 men and 27 women. Questionnaire was drawn as knowledge test. Evaluation was made in form of pie chart and in case of open question, there is a chart created from the answers. Research brought answer to 1 established goal – to find out the haemodialysis patient's knowledge about nutrition rules and 6 hypothesis.
